

Most healthcare upholsteries include an anti-microbial agent to inhibit the growth of bacteria and the spread of infection. That said, not all antimicrobials are created equal BUT does their anti-microbial truly contribute to the reduction of the routes to infection and cross contamination?

Shield Plus™ A unique, revolutionary fabric technology

- Unlike silver and other inorganic anti-microbial agents, **Shield Plus™**:
- Is a non-leaching and non-migrating technology which is encapsulated permanently within the vinyl
 - Destroys bacteria with immediate effect on contact
 - Is active for the life of the fabric
 - Does not deplete
 - Does not create immunity to the agent or adaptive organisms
 - Targets the broadest spectrum of microbes – effective even against the C diff spore
 - Is safe for the environment and you – free from toxic metals
 - Registered worldwide

| | | |
|--|--|---|
| <p>The micro-organisms are attracted to the molecular coating of the Shield Plus™ fabric by a negative/positive action</p> | <p>Upon contact, the cell membrane is punctured and the bio-chemicals within are electrocuted. Piercing and electrocution prevent growth and proliferation</p> | <p>Safe and optimal anti-microbial protection is provided, even after frequent cleaning</p> |
| <p>This mechanical action ensures that bacteria, fungi and algae are effectively and immediately controlled.</p> | | |
